7th RILEM International Conference on Cracking in Pavements Sep 10 2020 In the recent past, new materials, laboratory and in-situ testing methods and construction techniques have been introduced. In addition, modern computational techniques such as the finite element method enable the utilization of sophisticated constitutive models for realistic model-based predictions of the response of pavements. The 7th RILEM International Conference on Cracking of Pavements provided an international forum for the exchange of ideas, information and knowledge amongst experts involved in computational analysis, material production, experimental characterization, design and construction of pavements. All submitted contributions were subjected to an exhaustive refereed peer review procedure by the Scientific Committee, the Editors and a large group of international experts in the topic. On the basis of their recommendations, 129 contributions which best suited the goals and the objectives of the Conference were chosen for presentation and inclusion in the Proceedings. The strong message that emanates from the accepted contributions is that, by accounting for the idiosyncrasies of the response of pavement engineering materials, modern sophisticated constitutive models in combination with new experimental material characterization and construction techniques provide a powerful arsenal for understanding and designing against the mechanisms and the processes causing cracking and pavement response deterioration. As such they enable the adoption of truly "mechanistic" design methodologies. The papers represent the following topics: Laboratory evaluation of asphalt concrete cracking potential; Pavement cracking detection; Field investigation of pavement cracking; Pavement cracking modeling response, crack analysis and damage prediction; Performance of concrete pavements and white toppings; Fatigue cracking and damage characterization of asphalt concrete; Evaluation of the effectiveness of asphalt concrete modification; Crack growth parameters and mechanisms; Evaluation, quantification and modeling of asphalt healing properties; Reinforcement and interlayer systems for crack mitigation; Thermal and low temperature cracking of pavements; and Cracking propensity of WMA and recycled asphalts.

Resistance and Revolution in Mediterranean Europe 1939–1948 Aug 02 2022 This book, first published in 1989, is the first general study of Communism in Mediterranean Europe during and immediately after the war. It sheds light on the origins of Europe's Cold War East-West divide and probes the common and conflicting interests of the Soviet Union with the separate national and Communist resistance movements. It explores controversial issues including Stalin's intentions in post-war diplomacy, Communist attitudes to Nazi collaboration in France, and the origins of the Cold War. The decade following the outbreak of the war saw the transformation of society through armed conflict, national resistance and political revolution. The relationship between resistance to Fascism and occupation, on the one hand, and profound social and political changes on the other, was especially marked in southern Europe. In France and Italy, Communist parties emerged as prominent participants in post-war governments; in Yugoslavia the Communist partisans seized full power and effected a social revolution; while a similar attempt in Greece led to a long and bitter civil war.

And Ormus has to confront just how far he is willing to go for love. A Manual for Writers of Research Papers, Theses, and Dissertations, Eighth Edition Apr 29 2022 A little more than seventy-five years ago, Kate L. Turabian drafted a set of guidelines to help students understand how to write, cite, and formally submit research writing. Seven editions and more than nine million copies later, the name Turabian has become synonymous with best practices in research writing and style. Her Manual for Writers continues to be the gold standard for generations of college and graduate students in virtually all academic disciplines. Now in its eighth edition, A Manual for Writers of Research Papers, Theses, and Dissertations has been fully revised to meet the needs of today's writers and researchers. The Manual retains its familiar three-part structure, beginning with an overview of the steps in the research and writing process, including formulating questions, reading critically, building arguments, and revising drafts. Part II provides an overview of citation practices with detailed information on the two main scholarly citation styles (notes-bibliography and author-date), an array of source types with contemporary examples, and detailed guidance on citing online resources. The final section treats all matters of editorial style, with advice on punctuation, capitalization, spelling, abbreviations, table formatting, and the use of quotations. Style and citation recommendations have been revised throughout to reflect the sixteenth edition of The Chicago Manual of Style. With an appendix on paper format and submission that has been vetted by dissertation officials from across the country and a bibliography with the most up-to-date listing of critical resources available, A Manual for Writers remains the essential resource for students and their teachers.

Clay and Glazes for the Potter Apr 17 2021 My purpose in writing this book has been to present in as clear and understandable form as possible the important facts about ceramic materials and their use in pottery. The ceramic medium has a rich potential. It is so various and adaptable that each culture and each succeeding generation finds in it a new means of expression. As a medium, it is capable of great beauty of form, color, and texture, and its expressions are unique not only for variety but for permanence and utility as well. To make full use of the medium, the ceramist or potter not only needs skill, imagination, and artistic vision, but he also needs to have a sound knowledge of the technical side of the craft. This knowledge has not been easy to come by, and many of those seriously engaged in pottery have learned through endless experimentation and discouraging failures. It is hoped that the present work will enable the creative worker to go more directly to his goal in pottery, and that it will enable him to experiment intelligently and with a minimum of lost effort. While technical information must not be considered as an end in itself, it is a necessary prerequisite to a free and creative choice of means in ceramics. None of the subjects included are dealt with exhaustively, and I have tried not to overwhelm the reader with details. The information given is presented in as practical form as possible, and no more technical data or chemical theory is given than has been thought necessary to clarify the subject. This work is organized as follows: Part One—Clay Chapter 1. Geologic Origins of Clay Chapter 2. The Chemical Composition of Clay Chapter 3. The Physical Nature of Clay Chapter 4. Drying and Firing Clay Chapter 5. Kinds of Clay Chapter 6. Clay Bodies Chapter 7. Mining and Preparing Clay Part Two—Glazes Chapter 8. The Nature of Glass and Glazes Chapter 9. Early Types of Glazes Chapter 10. The Oxides and Their Function in Glaze Forming Chapter 11. Glaze Materials Chapter 12. Glaze Calculations, Theory and Objectives Chapter 13. Glaze Calculation Using Materials Containing More Than One Oxide Chapter 14. Calculating Glaze Formulas from Batches or Recipes Chapter 15. Practical Problems in Glaze Calculation Chapter 16. The Composition of Glazes Chapter 17. Types of Glazes Chapter 18. Originating Glaze Formulas Chapter 19. Fritted Glazes Chapter 20. Glaze Textures Chapter 21. Sources of Color in Glazes Chapter 22. Methods of Compounding and Blending Colored Glazes Chapter 23. Glaze Mixing and Application Chapter 24. Firing Glazes Chapter 25. Glaze Flaws Chapter 26. Engobes Chapter 27. Reappraisals May 19 2021 In Reappraisals award-winning historian Tony Judt argues that we have entered an 'age of forgetting', where we have set aside our immediate past before we could even begin to make sense of it. We have lost touch with generations of international policy debate, social thought and public-spirited social activism - and no longer even know how to discuss such concepts - and have forgotten the role once played by intellectuals in debating, transmitting and defending the ideas that shaped their time. Reappraisals is a road map back to the historical sense we urgently need. A masterful collection of essays, it examines the tragedy of twentieth-century Europe by way of thought-provoking pieces on Hannah Arendt, Edward Said, Albert Camus and Henry Kissinger amongst others.
