Survey of Accounting Jul 23 2021 This book provides the basics of both financial and managerial accounting. Financial accounting provides primarily monetary information about business activities that result in the financial statements that are published for use by people outside the business. Managerial accounting provides monetary and nonmonetary information about business activities that result in supporting details for the financial statements or that provide information for internal organizational users to plan, control, or make decisions about operations. It is not intended to be a comprehensive volume in either financial or managerial accounting, but an introduction for non-business majors. The book takes a user orientation, steering clear of detailed, technical discussions. Many interesting examples from the travel industry are integrated throughout to catch the reader's interest and to apply concepts to companies they may know.

Ethical Issues in International Marketing Mar 31 2022 Ethical Issues in International Marketing is a valuable resource for readers' increasing need for knowledge of this important area. In recent years, ethical issues in international marketing have come to the forefront due to publicity and controversy generated from several international cases of questionable ethics. To date, little research has been conducted in the area of international marketing ethics. Delener's book comes at an important time to alert readers to the growing concern for greater ethical behavior in the international marketing arena. It provides illustrations to give readers hands-on experiences that can transfer directly into the marketing world. Delener and his contributing authors identify the unique importance of ethics and corporate social responsibility in global markets. Ethical Issues in International Marketing was conceived to allow researchers the liberty to explore the topic in the context of an environment supportive of the difficulties associated with this type of research. The contributing authors discuss these main topics: A social contract for analyzing and evaluating the activities of transnational corporations in developing countries The relationship of marketing ethics to gray markets for consumer goods How moral commitment is shaped by socialization and role of culture in Turkey The relationship between Egyptian consumers' ideology and their perceptions of ethical behavior Readers who desire to make steps toward better global decisionmaking will find this a compelling book. The authors make readers realize that conducting business transactions efficiently and effectively in a mere technocratic sense is no longer sufficient. Ethical issues in the international marketing environment are best addressed in learning more about the differences between cultures, which this book begins to do.

Bowled Over Aug 24 2021 In this compellingly argued and deeply personal book, respected sports historian Michael Oriard—who was himself a former second-team All-American at Notre Dame—explores a wide range of trends that have changed the face of big-time college football and transformed the role of the student-athlete. Oriard considers such issues as the politicization of football in the 1960s and the implications of the integration of college football. The heart of the book examines a handful of decisions by the NCAA in the early seventies—to make freshmen eligible to play, to lower admission standards, and, most critically, to replace four-year athletic scholarships with one-year renewable scholarships—that helped transform student-athletes into athlete-students and turned the college game into a virtual farm league for professional football. Oriard then traces the subsequent history of the sport as it has tried to grapple with the fundamental contradiction of college football as both extracurricular activity and multi-billion-dollar mass entertainment. The relentless necessity to pursue revenue, Oriard argues, undermines attempts to maintain academic standards, and it fosters a football culture in which athletes are both excessively entitled and exploited. As a former college football player, Oriard brings a unique perspective to his topic, and his sympathies are always with the players and for the game. This original and compelling study will interest everyone concerned about the future of college football.

Cell, Tissue, and Organ Cultures in Neurobiology Dec 28 2021 Cell, Tissue, and Organ Cultures in Neurobiology emerged from an international workshop held at the University of Saskatchewan in March 1977. This book reviews the uses of cell, tissue, and organ cultures in neurobiological research. It brings together an interdisciplinary perspective from morphology, biochemistry, pharmacology, endocrinology, embryology, and genetics. The book is organized into seven parts. Part I contains papers on the characteristics of differentiated cells. Part II presents studies on cell differentiation in primary cultures. Part III deals with studies on cell cultures and cell strains. Part IV focuses on phenotypic cell expression. Part V examines various cellular interactions. Part VI covers studies on nutrition while Part VII takes up applications of cell tissue and organ cultures in neurobiology. The book is directed toward tissue culturists concerned with the nervous system, as well as all neurobiologists, cell biologists, and embryologists interested in learning how neural cells and tissues behave in cultures and what has been learned about the nervous system using tissue culture methods, including the applicability of tissue cultures to the study of cell differentiation.

Metabolic Turnover in the Nervous System Jun 29 2019 Volume V deals with the problems of turnover in the nervous system. "Turnover" is defined in different ways, and the term is used in different contexts. It is used rather broadly in the present volume, and intentionally so. The turnover of macromolecules is only one aspect; here "turnover" indicates the simultaneous and coordinated formation and breakdown of macromolecular species. The complexities of cerebral protein turnover are shown in a separate chapter

dealing with the synthesis of proteins, in another on breakdown, and in still another on the relationship of these two (showing how the two halves of turnover are controlled). The fact that most likely the two halves of protein turnover, synthesis and breakdown, are separated spatially and the mechanisms involved are different further emphasizes the complexity of macromolecular turnover. "Turnover" is used in a different context when the turnover of a cycle is discussed; but here again a number of complex metabolic reactions have to be interrelated and controlled: some such cycles are discussed briefly in this volume, additional cycles have been discussed with metabolism, and some cycles still await elucidation or discovery.

Ethics and Sustainability in Accounting and Finance, Volume I Aug 31 2019 This book discusses recent developments relating to ethical and sustainable issues in accounting & finance. Accounting is often seen as a technical discipline that records, classifies and reports financial transactions. However, since the financial information produced concerns all interest groups both within and outside the enterprise, accounting also has social characteristics and involves multi-faceted duties and responsibilities. As such, in addition to basic principles and accepted rules and standards in the field, this book focuses on the ethical aspects and fundamentals of this profession that accountants should also take into consideration, as this is the only way to build and preserve society's confidence in accounting and increase its social credibility.

Supply Chain Governance for Social Sustainability Apr 07 2020 This PhD thesis approaches the phenomenon of supply chain governance for social sustainability in the ready-made garment industry in Bangladesh. This research is based on a study of eight large multinational corporations (e.g. clothing brands and retailers) and their ready-made garment suppliers. The purpose of this research is to understand how supply chain governance mechanisms and governance structures improve social sustainability performance when stakeholders are engaged. The study identifies four main governance systems, namely, market-based, hierarchical control-based, collaborative multi-stakeholder-based and relational cross-sectoral-based. These governance systems are employed in the supply chain by the multinational corporations in combination with different stakeholders, such as suppliers, multi-stakeholder-initiatives, and non-government organisations. The study focuses on the challenges faced by the multinational corporations to ensure social sustainability, whilst at the same time, incorporating suppliers' viewpoints on the consequences of different governance systems for social sustainability. This research shows the choice of governance structures from market-based, hierarchy-based, collaboration-based and relational-based depend on the cost of managing relationships with the stakeholders and potential risks of governance in a given situation. An effective governance structure for a multinational corporation in a particular context is determined by how well the structure supports governance mechanisms to reduce associated transaction risks that results from potential opportunistic behaviour of the suppliers. In this research, it is argued that governance structure provides the platform for practicing a set of governance mechanisms. The study claims that social sustainability governance incorporates three mechanisms with separate outcomes: one consists of buyer-driven control-based mechanisms which include codes of conduct, supplier assessment and monitoring, and supplier training for regular social compliance; the second consists of multi-stakeholder-based governance mechanisms for structural compliance when unexpected problems occur, for example, building collapse, electrical and fire safety risks emerge; and the third comprises cross-sectoral governance mechanisms when the multinational corporations involve with non-government organisations for social development of the garment workers and community by facilitating drinking water, health-hygiene, education, and so on. This thesis contributes to the Sustainable Supply Chain Management literature by expanding knowledge of supply chain governance through bringing an understanding of governance mechanisms, governance structures and stakeholder engagements for social sustainability. As the demand for supply chain governance for social sustainability are growing, this thesis can help responsible corporate sourcing managers to develop a deeper understanding of how supply chain governance can affect social sustainability. Denna doktorsavhandling tar sig en fenomenet leverantörsstyrning för social hållbarhet i kläddindustrin i Bangladesh. Forskningen baseras på en studie av åtta stora multinationella företag, tillika återförsäljare av kläder och välkända klädmärken. Syftet med studien är att förstå hur leverantörsstyrningsmekanismer och styrstrukturer kan förbättra socialt hållbarhetsarbete när flera aktörer är engagerade och samverkar. Resultatet av studien indikerar att multinationella företag de facto engagerar sig med andra aktörer för att förbättra sin förmåga att bedriva socialt hållbarhetsarbete. Studien identifierar fyra olika typer av leverantörsstyrningssystem: ett marknadsbaserat, ett hierarkiskt kontrollbaserat, ett kollaborativt multi-intressentbaserat samt ett relationellt sektorsövergripande system. Dessa styrningssystem tillämpas i leverantörskedjan av de multinationella företagen i samarbete med andra aktörer såsom leverantörer, 'multi-intressentinitiativ' och icke-statliga organisationer. Studien fokuserar dels på de utmaningar som föreligger för de multinationella företagen när det gäller att säkerställa social hållbarhet, dels på hur leverantörer uppfattar konsekvenserna av de olika styrningssystemen för social hållbarhet. Denna forskning visar att valet av styrstruktur, från marknadsbaserad, hierarkibaserad, kollaborativ och relationell är beroende dels av kostnaden för att hantera och upprätthålla relationer med de olika aktörerna, dels av de potentiella riskerna som föreligger i en viss situation. Vad som utgör en effektiv styrstruktur för ett multinationellt företag i en viss given kontext avgörs av hur väl strukturen stöder styrningsmekanismer för att reducera transaktionsrisker som bottnar i ett potentiellt opportunistiskt beteende hos leverantörerna. I denna forskning argumenteras det för att struktur ger en plattform för att tillämpa ett antal styrningsmekanismer. Studien visar att styrning av social hållbarhet omfattar tre typer av mekanismer med olika utgång. En består av köparstyrda styrningsmekanismer som omfattar uppförandekoder, leverantörskontroll och leverantörsutbildning. Den andra består av multi-initiativbaserade styrningsmekanismer av hur det strukturella arbetet för att hantera oväntade problem (t.ex. bygg-, el- och brandsäkerhetsrisker) efterföljs. Det tredje omfattar sektorsövergripande styrningsmekanismer där de multinationella företagen samverkar med lokala icke-statliga organisationer i projekt som syftar till social utveckling (tillgång till rent vatten, hälso- & utbildningsinsatser, etc.) för fabriksarbetarna och det omgivande samhället. Denna avhandling bidrar till Sustainable Supply Chain Management-litteraturen då den utvidgar kunskapen om leverantörsstyrning för social hållbarhet genom en den ger en ökad förståelse för styrningsmekanismer, styrstrukturer och olika aktörers engagemang för social hållbarhet. I takt med att behovet av leverantörsstyrning för social hållbarhet ökar kan denna avhandling hjälpa ansvariga 'corporate sourcing managers' att utveckla en fördjupad förståelse för hur leverantörsstyrning kan påverka social hållbarhet.

Handbook of Neurochemistry Oct 14 2020 Anyone who has any contact with mental patients, old or young, or their families, or who just visits a mental hospital or school for the retarded, is aware of the tremendous suffering caused by malfunctioning of the brain. The function of no other organ is so crucial for our everyday life, our proper functioning, indeed our happiness, and no other illness causes as much anguish to patients or their families as mental illness. It is surprising and sad, therefore, how little effort has been devoted to research in this area: more so because such research is the only hope to ameliorate this suffering, or, to speak in the language of politics or economics, to decrease the enormous sums that we spend on trying to help our patients, with what is must generally be agreed are the most primitive and inadequate methods of treatment. Clearly, since functions of the brain are vital not only in illness, but in health, pathology is not the only area of concern to neurochemists, but it is an area that urgently needs neurochemical contributions. Progress in this field has been slower than in other areas of neurochemistry, and it seems that solutions in this field are very elusive. The reason for this is that the experimental approach is especially difficult in conditions specific for humans, or specific for complex behavior.

The Handbook of Technology Management, Supply Chain Management, Marketing and Advertising, and Global Management Aug 12 2020 The discipline of technology management focuses on the scientific, engineering, and management issues related to the commercial introduction of new technologies. Although more than thirty U.S. universities offer PhD programs in the subject, there has never been a single comprehensive resource dedicated to technology management. "The Handbook of Technology Management" fills that gap with coverage of all the core topics and applications in the field. Edited by the renowned Doctor Hossein Bidgoli, the three volumes here include all the basics for students, educators, and practitioners

Crime and Corruption in Organizations Dec 16 2020 Although increasing attention has been paid to it, there are no signs that crime and corruption in organizations is decreasing, so if you're a manager or government policy maker, and your mandate is to reduce crime and corruption, where do you start? The international authors of this book fill a critical need to address such a prevalent and costly topic with a detailed analysis of the risks associated with crime and corruption in organizations. They examine the causes and consequences, and the choices we face in our efforts to eradicate these social maladies. They focus on the risks to individuals and organizations surrounding criminal and corrupt acts, with an emphasis on the psychological, behavioral and organizational factors supporting such behaviors. Finally, they explore the phenomenon of crime and corruption across a diverse array of organizational settings (ranging from public to private, for-profit to non-profit) and occupational categories (e.g., police officers, physicians, accountants, and academicians). The constant barrage of scandals publicized by the media demands 'front burner' attention dedicated to stemming this tide. Accordingly, this book turns to prominent researchers employing their talents to produce more ethical organizations. The result is the most up-to-date thinking on both classic (e.g., cognitive moral development) and novel (e.g., moral attentiveness) approaches to crime and corruption, as well as scientifically-grounded approaches to reducing illicit behavior in organizations.

Service firms have high overhead costs which are difficult to assign to individual services. To bring transparency to their value chain, they need costing approaches that help them find their own improvements. Markus B. Baum explores current theory and practice of value chain approaches and cost accounting to develop a costing approach with a suitable instrument for the allocation of fixed and overhead costs for a service firm. He describes the service business costing (SBC) approach. This hybrid-costing model has a hierarchical structure in terms of consolidation and allocates cost and revenues on the lowest hierarchical level possible to ensure that all costs and income are assigned to activities from which they originated.

Codes of Ethics in Tourism Aug 04 2022 With ethics fast becoming a mainstay in tourism studies and the tourism industry in general, this volume provides a timely and intensive look at the theory and practice of codes of ethics in tourism. While the book includes a broad overview of what has been done to date in tourism studies in the area of code development and implementation, it ranges much more widely to incorporate theoretical work from outside the tourism field. This interdisciplinary approach serves two essential purposes. First, it furnishes the study of tourism codes of ethics with a theoretical foundation, which up to the present has been lacking. Second, it affords tourism scholars the opportunity to investigate codes in tourism from a multiplicity of perspectives, with direct relevance to the industry at many levels.

Citation Classics from the Journal of Business Ethics Nov 02 2019 The Journal of Business Ethics was founded by Alex C. Michalos and Deborah C. Poff and published its first issue in March 1982. It is the most frequently cited business ethics journal in the world. The Journal has always offered a multi-disciplinary and international public forum for the discussion of issues concerning the interaction of successful business and moral virtue. Its authors and readers are primarily scholars and students in social sciences and philosophy, with special interests in the interaction of these disciplines with business or corporate responsibility. Since the field of business ethics grew simultaneously with the growth of the Journal, a collection of its most cited articles is tantamount to a collection of the articles that had the greatest influence in defining the field over its first 30 years of development. In this anniversary volume, an overview of citation classics from the Journal is presented, the 33 most frequently cited articles are reproduced and brief reflections on the impact of the Journal on the field are given from over 100 scholars who authored citation classics and/or distinguished papers, as well as those who served on the Editorial Board and/or are recognized as leaders in the field.

Ethics and Organizations Jul 31 2019 This book is a study of the core issues in the field of business ethics from both an historical and a systematic standpoint. It analyzes corporate social responsibility, stakeholders, ethical codes, corporate cultures, and other issues. But the analysis takes place within a framework specially designed by the author in order to integrate the various dimensions of present-day business ethics. This integration is linked to an interpretation of business ethics as an organizational learning process in the context of the social and cultural changes caused by the emergence of a knowledge society. This approach makes it possible to adopt a focus and language, which can simultaneously take into account ethical concerns and corporate and organizational development. A previous version of the book (written in Catalan) was awarded the 1998 Joan Sardà Dexeus prize for best book on corporate economics by the Catalan Association of Economists.

Methods in Neurobiology Oct 02 2019 Rapid advances in knowledge have led to an increasing interest in neuro biology over the last several years. These advances have been made possible, at least in part, by the use of increasingly sophisticated methodology. Furthermore, research in the most rapidly advancing areas is essentially multidisciplinary and is characterized by contributions from many investigators employing a variety of techniques. While a grasp of fundamental neurobiological concepts is an obvious prerequisite for those who wish to follow or participate in this field, critical awareness and evaluation of neurobiological research also requires an understanding of sophisticated methodologies. The objective of Methods in Neurobiology is the development of such critical abilities. The reader is exposed to the basic concepts, principles, and instrumentation of key methodologies, and the application of each methodology is placed in the special context of neurobiological research. The reader will gain familiarity with the terminology and procedures of each method and the ability to evaluate results in light of the particular features of neurobiological preparations and applications. Protein Metabolism of the Nervous System Feb 04 2020 Few can deny the paramount importance of the neurosciences, undoubtedly one of the most challenging fields in contemporary science. Recent years have witnessed the awakening of interest in brain research by many distinguished investigators from other branches of science, which has made possible the multidisciplinary approach needed for the complex problems of this field. The present book, which deals with one aspect of this research, is the result of the symposium held under the auspices of the New York State Research Institute for Neurochemistry and Drug Addiction in April 1968. It has become clear that brain proteins are involved in all aspects of mental function and dysfunction, and the present volume documents the latest advances in our knowledge (advances made to a large extent by contributors to this volume). The chapters not only convey some of the enthusiasm and wonderful, cooperative spirit of the many excellent scientists exploring the brain, and their wealth of ideas; they also illustrate the many approaches from which cerebral proteins can be studied in a meaningful manner. In some areas even preliminary evidence is worth discussing: e.g., it is an exciting achievement that we can begin to apply the disciplines of bio chemistry to phenomena of learned behavior and information handling.
