[Modern Theory and Practice in Radio Communication: A Text Book Prepared for the Use of Midshipmen at the United States Naval Academy \(Classic Reprint\)](#) Nov 13 2020 Excerpt from Modern Theory and Practice in Radio Communication: A Text Book Prepared for the Use of Midshipmen at the United States Naval Academy Our endeavor has been to provide a book containing all the information necessary for the student who does not intend to specialize on Radio, and at the same time to produce a book which will serve as a basis for further study for the student who does wish to specialize. The book is not intended, however, for an instruction manual for a radio operator who has little interest in the how and why of his apparatus. Requirements of time and space have made it necessary to take for granted various statements which would be derived mathematically, or explained in detail, in a text dealing purely with fundamentals. These omissions are of such a nature that they may profitably be studied only by a student specializing on radio subjects. To understand the work as presented, the student should have a knowledge of elementary electricity and physics. Credit is due Lieutenant Commander P. L. Holland for Chapters I, II, III, IV, VI and XII. The remaining chapters are to be credited to G. D. Robinson. Department of electrical engineering and physics. [Technology, Science Teaching, and Literacy](#) Mar 06 2020 This book deals with the use of technology in science teaching. The author is not, nor has ever had an intention of being a "techie." Rather, I spent the

first decade of my professional life as a high school physics teacher, making occasional uses of technology to further student understanding and to automate my own teaching practices. During my graduate work, my interest in the use of technology continued. Catalyzed, to some extent by the increasing availability of graphical interfaces for computers, the realization struck that the computer was more and more becoming a tool that all teachers could use to support their teaching practice—not simply those with a passion for the technology itself. The rapid changes in the hardware and software available, however, frequently caused me to reflect on the usefulness of technology—if it were to change at such a rapid pace, would anyone, save for those who diligently focused on the development of these tools, be able to effectively use technology in science teaching? Was change to rapid to yield a useful tool for teachers? To address this interest, I examined the nature of science teaching during this century—using the equally fluid notion of “scientific literacy”—which formed the organizing principle for this study. The result is an examination of how technology was used to accomplishing this goal of producing scientifically literate citizens. What was observed is that technology, indeed, consistently came to the service of teachers as they attempted to achieve this goal.

Operating Manual for Spaceship Earth Mar 18 2021 One of Fuller’s most popular works, Operating Manual for Spaceship Earth, is a brilliant synthesis of his world view. In this very accessible volume, Fuller investigates the great challenges facing humanity. How will humanity survive? How does automation influence individualization? How can we utilize our resources more effectively to realize our potential to end poverty in this generation? He questions the concept of specialization, calls for a design revolution of innovation, and offers advice on how to guide “spaceship earth” toward a sustainable future.
